DETAILED ACTION

Allowable Subject Matter

 The following is an examiner's statement of reasons for allowance: The instantly claimed process for the oxidation of a C₂ to C₄ alkane or alkene to a carboxylic acid is neither disclosed nor fairly suggested by the closest prior art: et al (WO 01/90043-A1 11-2001). Zeyss teaches (Abstract) a process for the synthesis of acetic acid via the oxidation of ethane with molecular oxygen followed by reaction of acetic acid and ethylene to produce vinyl acetate. Zeyss teaches (Page 7, last paragraph) recycle of gaseous products from the first stage of oxidation containing up to 5% carbon monoxide and teaches that amounts of carbon monoxide above this threshold should be removed. Zeyss, however, teaches (ibid) that recycled oxidation effluent usually contains no or very small (<100 ppm) amounts of carbon monoxide. Thus, based upon Zeyss' teaching, one of ordinary skill in the art would have had no motivation to maintain the carbon monoxide concentration between the instantly required limits of 1% and 20% by volume of the total oxidation zone feed. The instantly claimed process is therefore patentable over the teaching of Zeyss. The closest prior art
